

Accurate Locators

MULTI SENSOR PRO ^{ART}

(Audio Response Targeting)

**Real-Time Averaging Audio-Visual & Numeric
Ground Imaging Locator**

"OUR INSTRUMENTS ARE SPECIFICALLY DESIGNED TO DETECT
DEEPER AND FASTER FOR PROFESSIONAL RESULTS"

Our "new" **Multi-Sensor Pro System** with Target ID Sound makes target location and depth estimation easier than ever before! Detect depths to **35 Ft (11 Meters)**. Average readings are received by the computer to show buried targets in a clear concise manner. This light weight system is simple to setup and operate; within minutes you are ready to find metals and voids including gold veins, meteorites, lost treasures, pipes and other riches. It comes with an Ultra Mobile PC, Control Unit, Field Pack, Battery and Antenna; complete with everything you need to start working.

MULTI SENSOR PRO ART

(Audio Response Targeting)

**Real-Time Averaging Audio-Visual & Numeric
Ground Imaging Locator**

The **Multi Sensor Pro ART** is a state of the art visual imaging sensor system that is well suited for both the utility locator as well as the professional gold prospector and treasure hunter.

The **Multi Sensor Pro ART** antenna has an averaging feature where the readings across the antenna are combined and averaged amplifying the target reading for quick location & identification. This will eliminate small unwanted objects.

This unit provides all the sensing power of our 3D Imaging units in a less expensive, mobile, lightweight, easy to use real-time (live) system. The UMPC's feature touch screen technology for simple operation. The software renders a real-time representation of the area under the antenna including high, low and current numeric readings. The audio feature can be made more or less sensitive depending on the needs of the ground conditions.

The **Multi Sensor Pro ART** is our newest ground imaging sensor unit featuring real-time live numeric averaging and color graphic output. The program now features a high beep for strong targets and a low beep for weak targets (eg. subsurface voids and tunnels) aiding in heads up identification. Get all of the mobility of the PinPointer Pro and the power of an averaging imaging antenna in one package delivering faster target identification over larger areas with the horizontal antenna.

Package price **includes a pre-configured Ultra Mobile PC with touch screen technology and Windows XP or better operating system** . * You may supply your own Pentium 3 equivalent or better laptop, mini or UMPC for a \$1000.00(USD) discount.

**Laptop make and model subject to change without notice*

Multi Sensor Pro ART (Audio Response Targeting)

Control Unit

Multi Sensor Pro ART Horizontal Antenna (12 inch)

Pre-Configured Ultra Mobile PC (UMPC) with Touch Screen Technology
